1 Identification

These operating instructions describe the HERR® Grinding table. When used in these operating instructions, the term "product" always refers to the HERR® Grinding table.

The HERR® Grinding table is a stationary solution for extracting and collecting the fumes and dust produced during grinding processes.

1.1 Signs and symbols used

In these operating instructions, the following signs and symbols are used:

•	General instructions.
1.	Steps to be carried out in succession.
-	Lists.
⇒	The cross-reference refers to detailed, supplementary or further information.
1	Caption, item description.

HERR® Grinding table 1 Identification

1.2 Classification of the warnings

The warning notices used are divided into four different levels and are printed in front of potentially dangerous work steps.

Depending on the type of danger, the following signal words are used:

A DANGER

Describes an imminent danger.

Will result in death or serious injuries if not avoided.

MARNING

Describes a potentially dangerous situation.

May result in death or serious injuries if not avoided.

A CAUTION

Describes a potentially damaging situation.

May result in slight or minor injuries if not avoided.

NOTE

Describes possible property damage.

If the notice is not followed, irreparable damage to the product or equipment can be the result. Work results may be impaired.

1.3 Product label

This product fulfills the requirements that apply to the market to which it has been introduced. A corresponding marking has been affixed to the product, if required.

2 Safety HERR® Grinding table

2 Safety

This chapter describes the essential safety requirements and warns of residual hazards that should be kept in mind, to kept the product safely. Non-observance of the safety instructions may result in risks to the life and health of personnel as well as cause environmental or material damage.

2.1 Intended Use

The product is used for extracting and collecting fumes and dust during grinding and polishing. The product can be used with filter systems or central extraction systems to extract and filter the fumes and dust produced during the machining of steel with an alloy content of nickel and chrome under 30%. The product must not be used for grinding or polishing aluminum.

- ► Only operate the product with original THERMACUT spare parts.
- ► Do not exceed the maximum load data given in the documents. Excess loads will lead to irreparable damage.
- ► Do not make any structural modifications to the product.
- ► Use the product only in a closed environment.
- ► Do not use or store the product in wet conditions.
- Only store the product outdoors when sufficiently protected against the influences of the weather.

The product may only be used for the purpose and in the way described in this document. Any other use is considered non-intended. Unauthorized conversion work or modifications to increase performance are not permissible.

2.2 Responsibilities of the operator

- ► Keep non-suitably qualified people away from the workplace.
- ► Ensure that only suitably qualified personnel perform work on the product or system.

Suitably qualified personnel are:

- those who are familiar with the basic regulations on occupational safety and accident prevention;
- those who have been instructed on how to handle the product;
- those who have read and understood all related documentation;
- those who have been trained accordingly;
- those who are able to assess the work assigned to them and recognize possible risks thanks to their special training, experience and knowledge.

HERR® Grinding table 2 Safety

2.3 Warnings and information signs

The following warning, notice and mandatory signs can be found on the product.

These markings must always be legible. They may not be covered, obscured, painted over, or removed.

2.4 Safety instructions

2.4.1 Basic safety instructions

The product has been developed and manufactured in accordance with the latest technology and recognized safety standards and directives. Due to the product design, unavoidable technical residual risks exist to the user, third parties, devices, and other material property. The manufacturer will accept no liability for damage caused by non-observance of the documentation.

- ► Please read the documentation carefully before using the product for the first time and comply with the instructions contained.
- Only operate the product in technically perfect condition and ensure compliance with all documentation.
- ► Read the documentation carefully before carrying out specific work, for example commissioning, operation, transport, and maintenance.
- ► Use suitable means to protect yourself and bystanders from the hazards listed in the documentation.
- Store the documentation within easy reach of the product for reference and enclose all documents when passing on the product.
- ► Consult the documentation for the other components used.
- ► Observe the local accident prevention regulations.
- Only trained specialists should commission, operate, and service the device. Trained specialists are persons who, based on their special training, knowledge, experience and due to their knowledge of the relevant standards, are able to assess the tasks assigned to them and identify possible dangers.
- ► Ensure the workplace is well lit and keep it neat and tidy.
- ► For disposal, observe the local regulations, laws, provisions, standards, and directives.

2.4.2 Safety instructions for grinding

- ► Grinding can damage eyes, skin and hearing. Note that further hazards can occur in connection with other grinding components. For this reason, always wear the mandatory protective clothing in accordance with local laws and directives.
- ► All metal vapors, especially lead, cadmium, copper and beryllium, are harmful. Ensure sufficient ventilation or extraction. Do not exceed the established occupational exposure limit (OEL).
- ► Adhere to the general fire protection regulations and remove flammable materials from the vicinity of the workplace prior to starting work. Provide suitable fire extinguishing equipment at the workplace.

2.4.3 Safety instructions for personal protective equipment

- ► Do not wear any loose clothing or jewelry.
- ► Wear a hairnet over long hair.
- ► Note local laws and directives concerning protective equipment.
- Make sure that any third parties in the direct vicinity are wearing personal protective equipment.
- ► Wear your personal protective equipment according to the hazard.

HERR® Grinding table 2 Safety

2.4.4 Safety instructions for grinding fumes and dust

The product contains harmful dust that can collect on surfaces and penetrate the ambient air as of the first use. They can damage the respiratory system when inhaled.

- ► Check and wear your personal protective equipment.
- ► Only use the product in rooms which are sufficiently ventilated.
- ► Make sure that all the seals on the product are free of dirt.
- ► Remove dust deposits in the surrounding area immediately using an industrial vacuum cleaner of dust class H or a damp cloth.
- ► The filters provided must always be used when operating the product.

The extraction of substances and materials which are combustible, aggressive, chemical or contain oil vapors as well as aluminum or magnesium dusts can lead to fire and explosion due to chemical reactions. Serious injuries and irreparable damage to the product can be the result.

- ► Only ever use the product as intended.
- ► Use a suitable filter system.

2.4.5 Safety instructions for emergencies

- ► In an emergency, immediately disconnect all supplies (for example electrical power supply, coolant supply, compressed air supply, shielding gas supply).
- ► Extinguish burning oil or emulsions using a CO₂ or powder fire extinguisher.

3 Scope of delivery

The following components are included in the scope of delivery:

- 1x HERR® Grinding table
- 1x operating instructions
- ► Order the equipment parts and wear parts separately.
- ► The order data for the equipment parts and wear parts can be found in the current order documents.
- For more information about points of contact, consultation, and orders, visit www.thermacut.com.

Although the items delivered are carefully checked and packaged before dispatch, it is not possible to fully exclude the risk of transport damage.

Goods-in inspection

- ► Use the delivery note to check that everything has been delivered.
- ► Check the delivery for damage (visual inspection).

Complaints

- ► If goods are damaged, contact the final carrier.
- ► Keep the packaging for a possible check by the carrier.

Returns

- ► Use the original packaging and packing material for returns.
- ► If you have questions concerning packaging and safety during shipment, contact your supplier, carrier, or transport company.

4 Product description

4.1 Structure and function

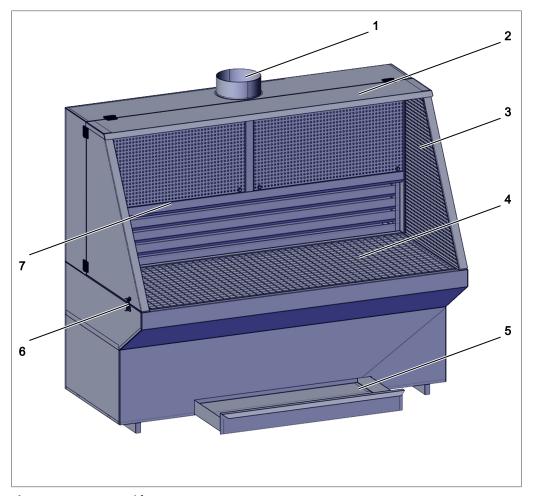

Figure 1 Structure and function

1	Connection piece	2	Top cover
3	Winged door	4	Grating
5	Dust bin	6	Tension locks
7	Slats		

During grinding processes, fumes and dust that are hazardous to health are produced, and these can be extracted and collected by the table and a connected filter system.

Fumes and dust are drawn downwards by the extraction section of the table and through the grating and through slats on the rear panel into the exhaust air duct and then into the filter system mounted on the table. During grinding, sparks, metal splatter and coarse dust particles drop downwards and are collected in an extractable dust bin.

The table has two winged doors and a top cover for the working area to be enlarged for bulky components.

The following filter systems can be connected to the product:

- HERR filter system, e.g. 880200-40

5 Technical data

5.1 Ambient conditions

Temperature of the ambient air	-10 °C to +40 °C	
Relative air humidity	80% non-condensing	

 Table 1
 Ambient conditions for transport and storage

Temperature of the ambient air	+10 °C to +40 °C
Relative air humidity	70% non-condensing

 Table 2
 Ambient conditions for operation

5.2 Product data

	EX-0-716-040	EX-0-716-041	
Dimensions (L x W x H)	1010 x 1000 x 1700 mm	1510 x 1000 x 1700 mm	
Working depth	750 mm		
Weight	220 kg	285 kg	
Capacity of dust bin	26	40	
Nominal diameter for DN intake piping	Ø 250 mm		
Air volume required	2000 m³/h	3000 m³/h	
Max. load	350 kg with even load per area unit		

 Table 3
 Product data

6 Transport and setup

MARNING

Risk of injury due to improper transport and setup

Improper transport and setup can cause the product to topple or fall over. Serious injuries can be the result.

- ► Check and wear your personal protective equipment.
- ► Place the product on a suitable base (flat, solid, dry) on which it will not topple over.
- ► Take the weight of the product into account when lifting it.

 5 Technical data
 (Page 12)
- Use an appropriate lifting tool with load handling attachment for transport and setup of the product.
- ► Avoid jerky lifting and set-down of the product.
- ► Do not lift the product over persons or other units.
- ► At least two fitters should transport and set the product up.

NOTE

Property damage due to improper transport and setup

Improper transport or setup can cause the product to topple or fall over. This can result in material damage and irreparable damage to the product.

- Protect the product against influences of the weather, for example rain and direct sunlight.
- ► Ensure that the product does not make contact if you pass over edges.
- ► Use the product only in dry, clean and well-ventilated rooms.
- ► Maintain a minimum distance of 1 m from the wall when setting the product up in order to ensure that the product has sufficient ventilation.
- ► At least two fitters should transport and set the product up.
- ► Only transport the water pan when it has been emptied.

NOTE

Material damage due to forklifts/pallet trucks driving under the product improperly

If the forklift/pallet truck drives too far under the product, it can be damaged.

► Drive under the product carefully and only until the forklift/pallet truck cannot go any further.

NOTE

Material damage due to unsuitable means of transport

If an unsuitable vehicle is used to drive under the product, the product and dust bin can be damaged.

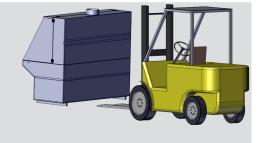

- ► Use a suitable forklift truck with a fork width of max. 50 mm.
- ► Take the low base height of the product into account.

The product can be transported and set up using a forklift.

► When transporting the product with a forklift, take the amount of space required by the forklift into account.

6.1 Transporting and Setting Up the Product

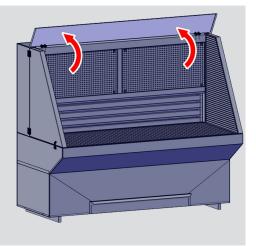

- 1. Drive a forklift with suitable fork length completely under the product.
- **2.** Transport to a suitable setup location and set down.

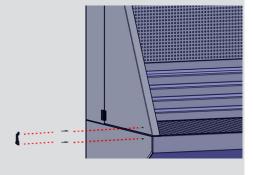

6.2 Modular extension of the working area

Adding further grinding tables can extend the working area. The winged doors must be dismantled at the connection points for this.

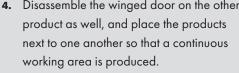

- ► Take the space required by the grinding tables into account.
- 1. Open the top cover of the first product.

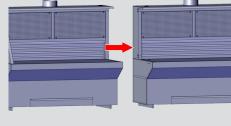

On the side to be extended, undo the screws of the tension lock and remove the tension lock.

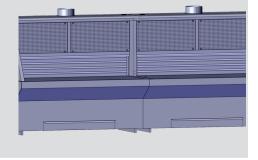

3. Undo the hinge screws on the side of the product and take winged door off. = :::::: 4. Disassemble the winged door on the other product as well, and place the products next to one another so that a continuous

5. Add further products in the same way if necessary.

7 Putting into operation

MARNING

Fire hazard due to improper use

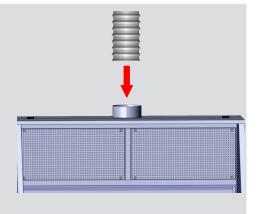

Improper use of the product can cause a fire. Serious burns can be the result.

- ► Do not use the product in areas subject to dust or explosion hazards.
- ► Do not use the product to extract dust that results from grinding oil-wetted parts.
- ► Do not use the product to extract flammable substances and liquids.

7.1 Mounting the piping to the air extraction fitting

The filter system or central extraction system must be attached to the connection air extraction fitting of the product using piping (not included in the scope of delivery). We recommend mounting a spark trap between the air extraction fitting and the piping in addition.

 Use suitable fasteners to attach the filter system to the air extraction fitting on the product and seal using sealing tape.

7.2 Carrying out functional test

- 1. Switch on the customer's filter system or central extraction system.
- 2. Make sure that the piping to the product is open and air flow can take place.
- 3. Check whether a draft can be felt at the slats and at the grid.
- If necessary, carry out a grinding test using an angle grinder to check the extraction and sparking.

HERR® Grinding table 8 Operation

8 Operation

MARNING

Health risk through inhalation of harmful grinding fumes and dust

The grinding process produces fumes with harmful dust particles which can settle on the surface and get into the ambient air. They can damage the respiratory system when inhaled.

- ► Check and wear your personal protective equipment.
- ► Only use the product in rooms which are sufficiently ventilated.
- ► Make sure that all the seals on the product are free of dirt.
- ► Remove dust deposits in the surrounding area immediately using an industrial vacuum cleaner of dust class H or a damp cloth.

MARNING

Fire hazard due to improper use

Improper use of the product can cause a fire. Serious burns can be the result.

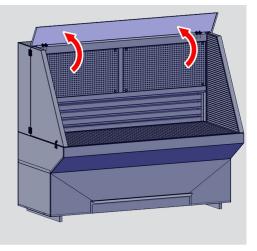

- ► Do not use the product in areas subject to dust or explosion hazards.
- ► Do not use the product to extract dust that results from grinding oil-wetted parts.
- ► Do not use the product to extract flammable substances and liquids.
- ► Switch on the connected filter system or central extraction system.
- ► Consult the documentation of all components used.

8 Operation HERR® Grinding table

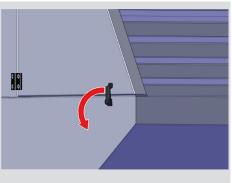

8.1 Opening the winged doors

The hinged lid and winged doors can be opened for the machining of long or bulky workpieces.

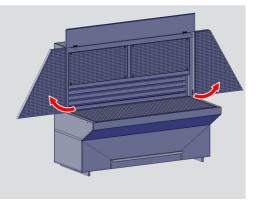

1. Open the top cover.

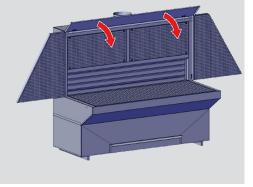

2. Undo the toggle-type fasteners on the winged door on both sides.

3. Open the winged doors.

4. Close the top cover.

9 Putting out of operation

- ► Switch the connected filter system or central extraction system off.
- ► Consult the documentation of all components used.

10 Maintenance and cleaning

Regular maintenance and cleaning are prerequisites for a long service life and perfect function. The maintenance interval is determined by the working environment and operating time of the products. If the product is operated for longer than 8 hours per day, the maintenance interval should be adapted according to requirements.

MARNING

Health risk through inhalation of harmful grinding fumes and dust

The grinding process produces fumes with harmful dust particles which can settle on the surface and get into the ambient air. They can damage the respiratory system when inhaled.

- ► Check and wear your personal protective equipment.
- ► Only use the product in rooms which are sufficiently ventilated.
- ► Make sure that all the seals on the product are free of dirt.
- After cleaning and maintenance work check all screwed joints for a tight fit, leaks, chafing points. Tighten any loosened screwed joints. Correct any faults found immediately.
- ► Remove dust deposits in the surrounding area immediately using an industrial vacuum cleaner of dust class H or a damp cloth.

MARNING

Risk of crushing

Limbs can be crushed if product components are improperly installed or uninstalled.

- ► Do not reach into the danger zone.
- ► Check and wear your personal protective equipment.
- ► Consult the documentation of all components used.

10.1 Maintenance and cleaning intervals

The given intervals are for guidance and refer to one-shift operation. We recommend documenting the checks. At least the test date, the defects found and the name of the tester should be documented.

Interval	Job
If necessary	► Check the fill level in the dust bin and empty if necessary. ⇒ 10.3 Emptying and cleaning the dust bin (Page 22)
Weekly	 Check the product for outer signs of damage. If installed, check the connection hoses and connections for a tight fit and damage, and replace if necessary. If installed, check the equipotential bonding cable for a tight fit and damage and replace if necessary. Check all connection points of the piping and connectors for dust escape.
Yearly	 If installed, check the ground connections of the product and filter system for damage. If installed, open the piping inspection flap, and check the piping for dust deposits.

10.2 Cleaning the grid, slats and interior

MARNING

Risk of injury due to sharp edges

The grid has sharp edges. Cutting injuries can be the result.

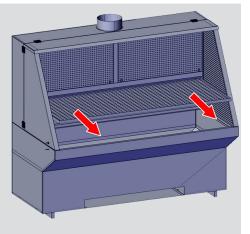

- ► Wear protective gloves.
- ► Use at least 2 people for removal and insertion of the grid.

To extract swirling dust particles directly, the connected filter system or central extraction system should be switched on during cleaning of the grid and the slats.

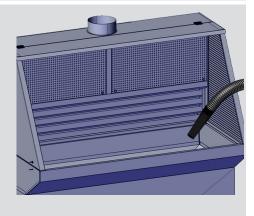

- 1. Switch the connected filter system or central extraction system on.
- 2. Clean the slats and grid with a hand brush.

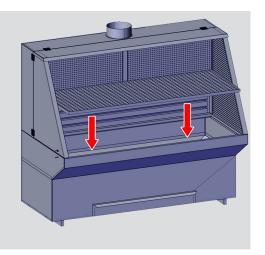

- **3.** Switch the connected filter system or central extraction system off.
- **4.** Have 2 people carefully lift and remove the grid.

5. Vacuum out the interior of the product using an industrial-standard vacuum cleaner of dust class H.

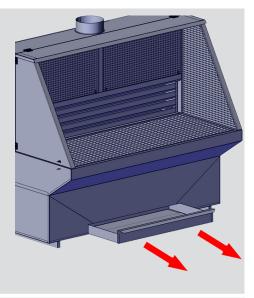

6. Have 2 people carefully insert the grid.

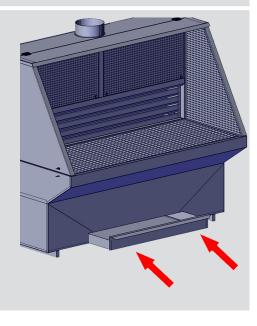

10.3 Emptying and cleaning the dust bin

1. Pull the dust bin out.

- 2. Empty the dust bin and vacuum out using an industrial-standard vacuum cleaner of dust class H if necessary.
- 3. Dispose of the dust in accordance with local laws and directives.

 ⇒ 13 Disposal (Page 26)
- 4. Insert the dust bin.

11 Faults and their correction

MARNING

Health risk through inhalation of harmful grinding fumes and dust

The grinding process produces fumes with harmful dust particles which can settle on the surface and get into the ambient air. They can damage the respiratory system when inhaled.

- ► Check and wear your personal protective equipment.
- ► Only use the product in rooms which are sufficiently ventilated.
- ► Make sure that all the seals on the product are free of dirt.
- ► Remove dust deposits in the surrounding area immediately using an industrial vacuum cleaner of dust class H or a damp cloth.
- ► Consult the documentation of all components used.
- ► Contact your retailer or THERMACUT in the event of questions or problems.

Fault	Cause	Troubleshooting
Insufficient extraction capacity	The filter system or central extraction system connected is not switched on.	Switch on the filter system or central extraction system.
	The filter system or central extraction system connected is not set correctly.	Set the extraction capacity in accordance with the legal requirements.
	The connected piping system is blocked.	► Eliminate blockage.

 Table 4
 Faults and troubleshooting

12 Disassembly

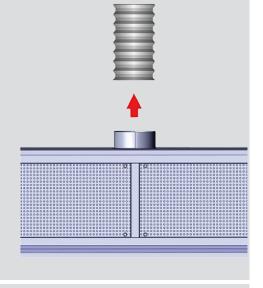

MARNING

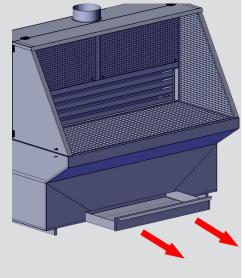

Risk of injury due to sharp edges

The grid has sharp edges. Cutting injuries can be the result.

- ► Wear protective gloves.
- ► Use at least 2 people for removal and insertion of the grid.
- Remove the piping of the filter system or central extraction system at the product air extraction fitting.

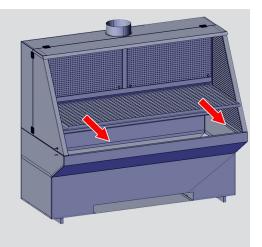

2. Pull the dust bin out.

HERR® Grinding table 12 Disassembly

3. Have 2 people carefully lift and remove the arid.

13 Disposal HERR® Grinding table

13 Disposal

13.1 Disposal of grinding dust

The disposal of grinding dust is subject to special waste regulations. Grinding dust must not be allowed to get into the sewage system or be disposed of together with household waste.

► Heed local laws and directives on disposal.

13.2 Disposal of materials

This product is mainly made of metallic materials that can be melted in steel and iron works and are thus almost infinitely recyclable. The plastic materials used are labeled in preparation for their sorting and separation for later recycling.

► Heed local laws and directives on disposal.

13.3 Disposal of consumables

Oil, greases and cleaning agents must not contaminate the ground or enter the sewage system.

- ► Store, transport and dispose of consumables in suitable containers.
- ► Dispose of contaminated cleaning tools (brushes, rags, etc.) in accordance with the information provided by the consumables' manufacturer.
- ► Observe the local laws and regulations on disposal provisions in the safety data sheets of the consumables manufacturer.

13.4 Disposing of packaging

THERMACUT has reduced the transport packaging to a minimum. The ability to recycle packaging materials was always considered during their selection.

► Heed local laws and directives on disposal.

15 Warranty HERR® Grinding table

15 Warranty

This product is an original THERMACUT product. THERMACUT GmbH guarantees correct manufacture and assumes a factory production and function warranty for this product upon delivery, which is in line with the most current technology and the regulations in force. If THERMACUT is responsible for a defect that is present, THERMACUT is obliged to remedy the defect or deliver a replacement at its own cost and its own discretion. The warranty covers manufacturing faults, but not damage resulting from natural wear and tear, overloading or improper use. The warranty period is defined in the General Terms and Conditions. Exceptions in the case of specific products are regulated separately. Warranty will also be rendered invalid if spare and wear parts are used that are not original THERMACUT parts and if the product has been repaired improperly by the user or a third party.

Wear parts are excluded in general from the warranty. In addition, THERMACUT is not liable for damage caused by using our products. Questions about warranty and service can be addressed to the manufacturer or our distributors.
